IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

ALLOWANCE

Status of Previous Rejections

The nonstatutory obviousness-type double patenting rejection of claims 1 – 7 as being unpatentable over claims 1 – 14 of US 7,615,186 B2 in view of “Fracture Toughness Properties-Effects of Microstructure and Heat Treatment” from the *Metals Handbook Desk Edition* has been withdrawn in view of the two 132 Declarations filed December 22, 2009 and April 11, 2011. Claims 1 – 14 of US 7,615,186 B2 do not disclose either for prior austenite grain size of the ratio ($\sigma_{0.2}/\sigma_B$) for which Applicant has demonstrated criticality in the 132 Declarations as discussed below.

Declaration Under 37 C.F.R. 1.132

The declaration under 37 CFR 1.132 filed April 11, 2011 in combination with the declaration under 37 CFR 1.132 filed December 22, 2009 is sufficient to overcome the rejection of claims 1 – 7 based upon Hashimura et al. (US 6,338,763 B1) in view of “Fracture Toughness Properties-Effects of Microstructure and Heat Treatment” from the *Metals Handbook Desk Edition* applied under 35 U.S.C. 103(a) as explained below.

Reasons for Allowance

The following is an examiner’s statement of reasons for allowance: the closest prior art of Hashimura in view of the *Metals Handbook Desk Edition* does not specifically teach that the steel wire has a prior austenite grain size number from 11.0 to 14.0 and teaches a ratio ($\sigma_{0.2}/\sigma_B$) that overlaps with the instant claimed ratio ($\sigma_{0.2}/\sigma_B$) recited in instant claim 1. However, Applicant has demonstrated the criticality of both the prior austenite grain size number and the ratio ($\sigma_{0.2}/\sigma_B$) with the support of the 132

Declarations filed December 22, 2009 (hereinafter Declaration I) and April 11, 2011 (hereinafter Declaration II).

In regards to the prior austenite grain size number, Table 2 Example 10 on p. 21 of the original disclosure of the instant invention recites a comparative example steel with a composition and ratio ($\sigma_{0.2}/\sigma_B$) within the instant claim 1 ranges but with a prior austenite grain size number of 10.5 which is just below the claimed minimum prior austenite grain size number of 11.0. The steel with a grain size number of 10.5 has a fatigue life of 31×10^5 and a residual shear strain of 0.250% which is inferior compared to the desired inventive values of a fatigue life of $\geq 100 \times 10^5$ and a residual shear strain of ≤ 0.175 as supported by Table 2 of the original disclosure which cites several examples within the instant claimed compositional ranges and austenite grain size number range. Furthermore, Test Steel 2 in Declaration II is a steel with a composition and ratio ($\sigma_{0.2}/\sigma_B$) within the instant claim 1 ranges but with a prior austenite grain size number of 14.5 which is just above the claimed maximum prior austenite grain size number of 14.0. The steel with a grain size number of 14.5 has a fatigue life of 85×10^5 and breakage in a coiling test which is inferior compared to the desired inventive values of a fatigue life of $\geq 100 \times 10^5$ and no breakage during a coiling test as supported by Table 2 of the original disclosure which cites several examples within the instant claimed compositional ranges and austenite grain size number range. Therefore, Applicant has demonstrated the criticality of the instant claimed prior austenite grain size number range and thus independent claim 1 is patentably distinct from the closest prior art and claims 1-7 are allowed.

Regarding the ratio ($\sigma_{0.2}/\sigma_B$), Test Steel 1 in Declaration II is a steel with a composition and grain size number within the instant claim 1 ranges but with a ratio ($\sigma_{0.2}/\sigma_B$) of 0.65 which is just below the claimed minimum ratio ($\sigma_{0.2}/\sigma_B$) of 0.67. The steel with a ratio ($\sigma_{0.2}/\sigma_B$) of 0.65 has a residual shear strain of 0.285% which is inferior compared to the desired inventive value of a residual shear strain of ≤ 0.175 as supported by Table 2 of the original disclosure which cites several examples within the instant claimed compositional ranges and ratio ($\sigma_{0.2}/\sigma_B$) range. Furthermore, the Test Steel of Declaration I is a steel with a composition and grain size number within the instant claim 1 ranges but with a ratio ($\sigma_{0.2}/\sigma_B$) of 0.861 which is just above the claimed maximum ratio ($\sigma_{0.2}/\sigma_B$) of 0.85. The steel with a ratio ($\sigma_{0.2}/\sigma_B$) of 0.861 has a fatigue life of $\leq 80 \times 10^5$ which is inferior compared to the desired inventive value of a fatigue life of $\geq 100 \times 10^5$ as supported by Table 2 of the original disclosure which cites several examples within the instant claimed compositional ranges and ratio ($\sigma_{0.2}/\sigma_B$) range. Therefore, Applicant has demonstrated the criticality of the instant claimed ratio ($\sigma_{0.2}/\sigma_B$) range and thus independent claim 1 is patentably distinct from the closest prior art and claims 1-7 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
